

## Green Belt Training

The Lean Six Sigma GB training enables participants to lead project teams working on waste reduction , quality improvements and to make bottom line improvements. The Candidates will be able to apply the 5 step DMAIC methodology to solve problems and accomplish project goals .

Participants are expected to present their project charter during the training session and gain insights on how to use lean and six sigma tools in their projects and also about team dynamics and management. Participants will solve problems using quality and statistical tools and Sigma XL software.

GB certification requires attending the 4 day program, completion of exam and a lean six sigma project.
